Books in this area are mostly multi-authored, describing very specific and narrow areas. Thus for the 50th anniversary of artificial cells the author has just prepared a monograph on ARTIFICIAL CELLS: Biotechnology, Nanomedicine, Regenerative Medicine, Blood Substitutes and Cell/Stem Cell Therapy . This is now such a large area that it needed more than 1000 references just to summarize the present status and future perspectives of artificial cells.

Recent advances on biomedical applications of scaffolds in

Artificial red blood cells. The first artificial red blood cells fulfilled the following three major functions of red blood cells: (1) oxygen transport ; (2) carbon dioxide transport ; and (3) antioxidant functions (Chang and Poznanski 1968). However, serious interest in this area did not start until the HIV-contaminated-donor blood crisis.

From artificial red blood cells, oxygen carriers, and
