Standard Model", it is natural for us to ask what lies beyond that model. 1.1 A Complete Theory? But before doing that we should appreciate the remarkable situation that we are in. The current time can without exaggeration be called a historical moment in the history of physics.

But the Standard Model is only a "low energy" approximation to a more fundamental theory. The Standard Model cannot be valid at energies above the Planck scale ( $\sim 10^{19}$  GeV), where gravity can no longer be ignored.
