CHAPTER 2 Protein Structure 31 Side Chains with Polar but Uncharged Groups Six amino acids have side chains with polar groups (FIGURE 2.4). Asparagine and glutamine are amide derivatives of aspartate and glutamate, respectively. Serine, threonine, and tyrosine have side chains with hydroxyl (-OH) groups.

SECTION Protein Structure and Function I

The cell (from Latin *cella*, meaning "small room") is the basic structural, functional, and biological unit of all known living organisms. A cell is the smallest unit of life. Cells are often called the "building blocks of life". The study of cells is called cell biology. Cells consist of cytoplasm enclosed within a membrane, which contains many biomolecules such as proteins and nucleic acids.

Chapter 1 Basics

DNA is a long polymer made from repeating units called nucleotides. The structure of DNA is dynamic along its length, being capable of coiling into tight loops and other shapes. In all species it is composed of two helical chains, bound to each other by hydrogen bonds. Both chains are coiled around the same axis, and have the same pitch of 34 \AA (3.4 nanometres).

Excel is a popular and powerful spreadsheet application for Windows. The openpyxl module allows your Python programs to read and modify Excel spreadsheet files. For example, you might have the boring task of copying certain data from one spreadsheet and pasting it into another one.

Automate the Boring Stuff with Python

See Chapter II.C.2.j for additional guidance on the mentoring and data management plan requirements for collaborative proposals. NSF will combine the proposal submission for printing or electronic viewing. To submit the collaborative proposal, the following process must be completed: 29 (i) Each non-lead organization must assign their proposal a proposal PIN.

Base Units for the International System of Measurement
• Length - meter, m, the distance that light travels in a vacuum in 1/299,792,458 of a second
• mass - kilogram, kg, the mass of a platinum-iridium alloy cylinder in a vault in France

An Introduction to Chemistry

The line `bar = foo` does not copy the contents of the variable, only its "object reference". To understand what is going on here, we need to know how lists are stored in the computer's memory. In 4.1, we see that a list `foo` is a reference to an object stored at location 3133 (which is itself a series of pointers to other locations holding strings). When we assign `bar = foo`, it is just the ...
