

colloidal drug delivery systems pdf

1. Introduction. Drawbacks to intravenous administration, including extravasation of drug or blood, catheter infections, and thrombosis can be prevented by administering the drug orally, making the oral delivery the most popular route of administration. Nonetheless, oral administration is limited by problems related to physico-chemical properties of the drug, including poor solubility, low ...

The Smart Drug Delivery System and Its Clinical Potential

The most promising application of nanomaterials is the promise of targeted, site-specific drug delivery. The potential of eliminating a tumorous outgrowth without any collateral damage through nanomaterial-based drug delivery has created significant interest and nanoparticles form the basis for bio-nano-materials [] and major efforts in designing drug delivery systems are based on ...

Nanomedicine and drug delivery: a mini review | SpringerLink

A hydrogel is a network of polymer chains that are hydrophilic, sometimes found as a colloidal gel in which water is the dispersion medium. A three-dimensional solid results from the hydrophilic polymer chains being held together by cross-links. Because of the inherent cross-links, the structural integrity of the hydrogel network does not dissolve from the high concentration of water.

Gel - Wikipedia

Journal of Applied Pharmaceutical Science 01 (06); 2011: 228-234 which the drug is surrounded by a unique polymeric membrane. This systemic review focuses on Classification, method of

Nanoparticle: An overview of preparation and characterization

Abstract. Biosafety is the primary concern in clinical translation of nanomedicine. As an intrinsic ingredient of human blood without immunogenicity and encouraged by its successful clinical application in Abraxane, albumin has been regarded as a promising material to produce nanoparticles for bioimaging and drug delivery.

Semi-solid and soft nanoparticles have been manufactured. A prototype nanoparticle of semi-solid nature is the liposome. Various types of liposome nanoparticles are currently used clinically as delivery systems for anticancer drugs and vaccines.
