An attenuator is an electronic device that reduces the power of a signal without appreciably distorting its waveform.. An attenuator is effectively the opposite of an amplifier, though the two work by different methods.While an amplifier provides gain, an attenuator provides loss, or gain less than 1.

The word electricity refers generally to the movement of electrons (or other charge carriers) through a conductor in the presence of potential and an electric field.The speed of this flow has multiple meanings. In everyday electrical and electronic devices, the signals or energy travel as electromagnetic waves typically on the order of 50%–99% of the speed of light, while the electrons ...
