Highlights We propose to use electromagnetic (EM) devices for both vibration damping and energy harvesting. This study presents modeling and testing of linear EM dampers connected with four circuits. A good match is observed between the theoretical modeling and experimental testing. The promises and challenges of using EM dampers in structures for both purposes are discussed.

Friction is the force resisting the relative motion of solid surfaces, fluid layers, and material elements sliding against each other. There are several types of friction: Dry friction is a force that opposes the relative lateral motion of two solid surfaces in contact. Dry friction is subdivided into static friction ("stiction") between non-moving surfaces, and kinetic friction between moving ...
