Linear programming can be considered as providing an operational method for dealing with economic relationships, which involve discontinuities. It is a specific approach within the general framework of economic theory. The main similarities and differences between traditional economic analysis and linear programming may be outlined as follows.

### **Linear Programming (Explained With Diagrams)**

Linear programming theory provides a good introduction to the theory of duality in nonlinear programming. Linear programs appear in many economic contexts but the exact form of the problems varies across applications. We shall present several equivalent formulations of the basic linear programming problem in this introductory section.

2.4 A Linear Programming Problem with no solution. The feasible region of the linear programming problem is empty; that is, there are no values for  $x_1$  and  $x_2$  that can simultaneously satisfy all the constraints. Thus, no solution exists.<sup>21</sup> 2.5 A Linear Programming Problem with Unbounded Feasible Region: Note that we can continue to make level ...
