(PDF) Computation of dioptic and magnification matrices

Computation of dioptic and magnification matrices in ophthalmic lenses. ... I present a novel method to numerically compute these matrices in ophthalmic lenses comprising any set of arbitrary surfaces. The method is based on computing one base ray, along the gaze direction, and two rays close to it. ... The PDF file you selected should load ...

We propose a set of geometrical entities associated with the dioptic and magnification local matrices, which are analyzed in several examples. We prove that there is a strong correlation between such entities (e.g., astigmatism and anamorphic distortion), which, to a certain extent, is maintained even in highly asymmetric lenses.

Geometrical interpretation of dioptic blurring and

a 1 D lens focuses rays of light at a distance of 1 meter, 1 meter is the focal length of a 1 D lens. To determine focal length, divide 1 meter (100 cm) by the dioptic power of the lens (Figure 2-2). This is the inverse of the diopter formula. For example, a 5 D lens has a focal length of 20 cm ($100 \text{ cm} / 5 \text{ D} = 20 \text{ cm}$).
