Dual inheritance theory (DIT), also known as gene-culture coevolution or biocultural evolution, was developed in the 1960s through early 1980s to explain how human behavior is a product of two different and interacting evolutionary processes: genetic evolution and cultural evolution. Genes and culture continually interact in a feedback loop, changes in genes can lead to changes in culture ...

The problem presented in this experiment is called the quantum measurement problem (QMP). It refers to (as seen in the video) the intriguing effect whereby quantum objects appear to behave differently when observed than when unobserved. (2) Scientists only view it as a problem because it disregards what our senses tell us, that the world is completely independent of observation.
