Aluminium oxide (IUPAC name) or aluminum oxide (American English) is a chemical compound of aluminium and oxygen with the chemical formula  $Al_2O_3$ . It is the most commonly occurring of several aluminium oxides, and specifically identified as aluminium(III) oxide. It is commonly called alumina (regardless of whether the element is spelled aluminum or aluminium), and may also be called aloxide ...

Water is the chemical substance with chemical formula  $H_2O$ ; one molecule of water has two hydrogen atoms covalently bonded to a single oxygen atom. Water is a tasteless, odorless liquid at ambient temperature and pressure, and appears colorless in small quantities, although it has its own intrinsic very light blue hue. Ice also appears colorless, and water vapor is essentially invisible as a gas.

Nowadays, due to energy storage has drawn global attention due to the ever rising energy and environmental problems about depleting of fossil fuels, rapid growth of population and global warming , , , , . Due to high power density ( $>10 \text{ kW kg}^{-1}$ ), low cost, high rate capability, long cycle life ( $>1000000$  cycles), high conversion efficiency: the large current cycle efficiency more than 90% ...

Graphene oxide (GO), which is obtained by chemical functionalization and exfoliation of graphite, is receiving attention due to its facile dispersion in water , electronically insulating properties , thermal conductivity , and gas barrier properties . The oxygen-containing functional groups on the surface of GO include carboxylic, hydroxyl, epoxy and carbonyl groups (Fig. 1a) , , resulting in ...

Ceramics International covers the science of advanced ceramic materials. The journal encourages contributions that demonstrate how an understanding of the basic chemical and physical phenomena may direct materials design and stimulate ideas for new or improved processing techniques, in order to obtain materials with desired structural features and properties.
