Geometry (from the Ancient Greek: $\gamma\epsilon\omicron\mu\epsilon\tau\epsilon\lambda\omicron\gamma\iota\alpha$; geo-"earth", -metron "measurement") is a branch of mathematics concerned with questions of shape, size, relative position of figures, and the properties of space. A mathematician who works in the field of geometry is called a geometer.. Geometry arose independently in a number of early cultures as a practical way for dealing with lengths ...

Resize the image using data-dependent triangulation. See Image Geometry for complete details about the geometry argument. The -adaptive-resize option defaults to data-dependent triangulation. Use the -filter to choose a different resampling algorithm. Offsets, if present in the geometry string, are ignored, and the -gravity option has no effect.

Bird flight is the primary mode of locomotion used by most bird species in which birds take off and fly. Flight assists birds while feeding, breeding, avoiding predators, and migrating.. Bird flight is one of the most complex forms of locomotion in the animal kingdom.

Below is a list of OGC Implementation Standards. Implementation Standards are different from the Abstract Specification. They are written for a more technical audience and detail the interface structure between software components.

Since a GeoPackage is a database container, it supports direct use. This means that the data in a GeoPackage can be accessed and updated in a "native" storage format without intermediate format translations.

Basic adjustments to width and height; the operators %, ^, and !. Here, just below, are a few simple examples of geometry, showing how it might be used as an argument to the 'resize' option. We'll use the internal image logo: for our input image. This fine image is 640 pixels wide and 480 pixels high. We say its dimensions are 640x480. When we give dimensions of an image, the width (the ...
